2021-2024

PREFACE

Nu-Chek has been preparing your highly purified lipid compounds both as individual standards and as model mixtures for the past 50 years.

But that's not the entire story. We go back to times when criteria of purity was based on such things as Iodine value and melting point.

Pure Methyl Oleate was a compound that contained enough inherent Stearate and Linoleate to give the Oleate its theoretical Iodine value.

Palmitic Acid was often designated as pure when it contained enough Myristate and Stearate to give a correct melting point.

Before the advent of GLC and TLC, triglycerides were synthesized by the interesterification of what was assumed to be pure methyl ester. The reaction end product was made available to researchers as highly purified triglyceride. Of course, chromatography confirmed later that the best of these reactions never went to completion beyond 75%-80%.

Indeed, one can go on indefinitely over incorrect data which has been listed in the literature. Physical data on lipids even when listed in the handbooks is many times not valid.

Within more recent years, scientific research in the lipid field has made some fantastic progress. Chromatography along with other sophisticated instrumentation has eliminated analysis guess work.

Only those isolated fractions which contain no detectable impurities even with large overloads (as analyzed both by GLC and TLC) are able to pass our rigid purity requirements, and in turn are made available to the scientific community for research purposes.

At Nu-Chek our pride is in our product.

GENERAL PRODUCT INFORMATION

Purity Guarantee

Nu-Chek generally prepares chromatographically pure compounds listed in our catalog as having a purity greater than 99%+. Varying degrees of purity (i.e. relatively pure greater than 90%) are so listed. Compounds of lesser degree purity can also be obtained by special request.

All products made available under our label are guaranteed to meet the minimum specifications designated at the time of sale. Age or condition of storage may alter chemical properties for which change we cannot be held liable.

If at the time of sale any of our products are found to be inferior or of a degree purity less than specified, Nu-Chek will supply you (free of charge) an adequate replacement, or at our option, refund your purchase price. All claims must be made within 60 days of invoice date. (Antioxidants tend to alter normal compound functions therefore are never added.)

**INCORRECT ORDERS ON THE CUSTOMERS PART WILL RESULT
IN A RE-STOCK FEE OF 25% OF THE RETURNED ITEMS.**

Warning of a Legal Nature

The compounds listed in our catalog are offered strictly for scientific research purposes only.

THEY ARE NOT INTENDED FOR HUMAN CONSUMPTION OR TO BE USED IN:

1. FOOD OR FOOD ADDITIVES
2. MEDICINAL OR DRUG RELATED USES.

We assume no responsibility with respect to their use other than research.

While physical data and information included in our catalog are precise and accurate to the best of our knowledge, a total guarantee cannot always be substantiated; and therefore, final acceptance of such data must be voluntary.

**OUR UNSATURATED COMPOUNDS ARE INSERTED
BY VOLUME RATHER THAN WEIGHT. EXACT WEIGHTS
MAY BE OBTAINED IF DESIRED WITH A
\$3.75 SERVICE CHARGE PER VIAL.**

**ALL OF OUR UNSATURATED COMPOUNDS ARE FLUSHED SEVERAL TIMES WITH
NITROGEN AND SEALED UNDER HIGH VACUUM THUS ELIMINATING THE NEED TO
SHIP ANY PRODUCT UNDER DRY ICE. OUR UNIQUE SYSTEM OF SEALING HAS BEEN
TESTED FOR OVER 50 YEARS AND HAS PROVEN VERY EFFECTIVE.**

NU-CHEK PREP, INC.

TERMS & CONDITIONS OF SALE

PRICES & TERMS

All prices are shown in U.S. Dollars.

Payment terms are net 30 days.

Visa, Mastercard, American Express and Discover are accepted.

Every effort will be made to maintain pricing for the current catalog period;
however, prices are subject to change without notice.

All claims for replacement or credit must be made within 60 days of the invoice date.

SHIPPING

We ship using Federal Express.

We prepay and add the charge to the invoice.

- **FedEx Collect -**

You may use your own account number. Please provide this number when ordering.

Please inspect your package immediately upon receipt
and notify us promptly of any damage or discrepancies.

FCA Shipping Point

- **International:**

Duty and Tax charges are the responsibility of the customer along with any other customs charges that may arise.

Failure to claim and clear packages will result in additional fees.

The customer is responsible for obtaining any needed licenses to export and import.

SAFETY DATA SHEETS / CERTIFICATES OF ANALYSIS (SDS/COA)

We supply an SDS and COA for every item on your order.

These are placed inside every package.

**SDS's and COA's are also available to customers for
previously purchased products upon request.**

ORDER INFORMATION

NU-CHEK-PREP has no minimum requirement. All orders are accepted and the same meticulous care is given to an order of a few milligrams as to one of kilogram quantities.

When ordering please use the name of compound and product code number. The prices listed are currently in effect; however, they are subject to change without notice.

**Discounts are always available
for larger sizes than those listed in our catalog.**

AVOIDING DUPLICATE ORDERS

Submit orders only once.

**When inquiring about the status of your order do not include
the actual order.**

Do not send a confirmation copy of your order.

BUSINESS HOURS

8:00 A.M. - 4:30 P.M. CENTRAL STANDARD TIME

NU-CHEK-POLICY

LIPID RESEARCHERS THINK NU-CHEK

If you are contemplating the purchase of high purity lipids and have several options at your disposal, we think you should give our organization consideration.

At NU-CHEK the preparation of lipid organics is not a sideline!!! It is our total existence! Through long experience and technical know-how we offer our line of chemical compounds in a purity seldom equaled and never excelled with prices that can keep your research program within a realistic budget.

Pick up any of our competitors' catalogs and the message becomes obviously clear. After leafing through page after page of column packing, TLC and GLC accessories, reagents, syringe needles and tubing - somewhere in the catalog (usually as an afterthought) is a buried section called "Lipids" and indeed often at prices that tend to make your research program prohibitive.

Our entire catalog listing is categorized in a logical manner so as to give you maximum assistance in locating your specific interest.

As this catalog goes to press Nu-Chek-Prep., Inc. will be starting their 50th year in a continuing policy of making the finest lipid-organics available at the lowest possible prices to the world wide scientific community. Our objective is simply to serve the lipid organic field to the best of our abilities.

If we can be of service to you at any time please contact us.

FATTY ACIDS AND ESTER HOMOLOGS

Even numbered chains of saturated and unsaturated fatty acids occur predominately in many of nature's animal and vegetable fats and oils.

Until recently it was assumed that the occurrence of straight chain odd number fatty acids in natural fat were rare. Recent analytical instrumentation has proven this to be a fallacy, since the presence of odd number carbon fatty acids have been shown to occur as minor constituents in practically every natural fat. What role they actually play in nature's scheme may be eventually established by continued research.

Nu-Chek high purity lipids are isolated in our own laboratory from the best commercial vegetable oil source available. Fatty acid chains of odd numbered compounds are generally synthesized by chain extension. Saturated chains and the unsaturated series (other than polyunsaturated fats) are always purified by a final distillation on a hundred theoretical plate high vacuum fractionating column. This is done to remove color along with other extraneous trace impurities. Only those fractions on which impurities are unable to be detected even with large overloads both by GLC and TLC are made available for product sale.

The isolation of high purity unsaturated compounds are always protected under an atmosphere of inert gas (i.e. N₂). The final product, with the exception of high melting saturated compounds, is always flushed with nitrogen, sealed in Pyrex glass or Wheaton pre-scored ampules under vacuum, and stored under cold condition of 0°C or lower until ready for shipment.

Whenever possible, our pure fatty acids and esters are isolated from their natural source by various physical techniques holding the conversion of unwanted isomers to a negligible minimum.

UNSATURATED SERIES

Straight chain fatty acids, mono basic, aliphatic, terminating in a single carboxyl group and of reduced hydrogen content than their saturated counterparts, constitute the ethylenic family of unsaturated fatty acids. They are of considerable importance since linkage with other chemical radicals is readily accomplished at the double bond positions. Multiple unsaturation is found in almost all natural occurring vegetable and animal fats. Research in recent years has shown them to be of great significance.

Double bonds are susceptible to oxidation so that stability is a factor to be reckoned with (especially polyunsaturated compounds) when researching unsaturated fatty acids or their corresponding esters.

Hightly purified unsaturated compounds prepared in our laboratory are always flushed several times with nitrogen, sealed in glass under vacuum and stored under cold conditions until ready for shipment.

Nu-Chek suggests that when your shipment is received, that it should be stored under cold conditions; that it be used as soon as possible and that the hermetically sealed ampules are not opened until ready to use.

GLYCERIDES

The distribution of random fatty acids in naturally occurring fats and oils in the form of triglycerides dates back to antiquity.

Indeed, the use of soap-cosmetics and oil lubricants dates back thousands of years. While we at Nu-Chek do not profess to go back quite that far, we would like to say that we have been synthesizing pure glyceride standards for the scientific community for over 50 years.

The general procedure for all our triglyceride preparations is well exemplified in Nu-Chek's Triglyceride. Our starting material is chromatographically pure Methyl Oleate (isolated from the best vegetable oils available) which is then interesterified for the production of crude Triglyceride. To assure geometric stability of cis double bonds, the material is further purified by such physical techniques as low temperature crystallization and column chromatography. The final purity is followed both by gas liquid and thin layer chromatography.

Other triglycerides are prepared in a similar manner commencing with the particular oil which contains the best concentrates of the specific ester required.

FATTY ALCOHOLS

Fatty alcohols, or as they are sometimes called, higher alcohols, are monohydric aliphatic alcohols containing a large number of carbon atoms terminating with a hydroxyl group. They have many uses both commercially and in research, especially in the field of detergents and plasticizers.

Nu-Chek Fatty Alcohols are prepared by the reduction of the chromatographically pure methyl ester. Trace impurities are removed by high vacuum fractional distillation. The final product is analyzed both by GLC and TLC and only those fractions which meet our rigid purity specifications are designated for product availability.

CHOLESTEROL (Lipid Derivatives)

Our cholesterol esters are prepared by the interaction of the appropriate chromatographically pure methyl ester and highly purified cholesterol. Further purification is followed by column chromatography and low temperature crystallization. Only those fractions which show no residuals (even with large over-loads) are isolated, sealed in glass under vacuum and stored under cold conditions until ready for shipment.

A LOOK AT NU-CHEK GLC & TLC STANDARDS

Our association with Lipid Researchers over the past 50 years; during meetings, seminars and conventions, has brought about suggestions in ways to improve product listing. One of these suggestions was that a larger listing of model mixtures that would be more representative of a specific oil would be of special interest. In this listing, we have included many new model standards along with our original series of exact weights in various percentages to assist you in GLC correlations.

If you have a special oil in mind which is not listed either as a natural oil or as a preweighed standard, please contact us.

Nu-Chek-Prep reference standards are prepared from individual chromatographically pure lipid esters. Each component used in making up our reference mixture is carefully checked by GLC using large overloads. Only those fractions which meet our rigid requirements go into the final make-up. After being weighed to the nearest tenth of a milligram, the combined material is again analyzed as a total mixture. They are then flushed with nitrogen, sealed in glass ampules under vacuum, and finally stored at -20 degrees C. until ready for shipment.

WHY NU-CHEK-PREP A B C MODEL STANDARDS?

From conversations with many GLC analysts throughout the country it was brought to our attention that many instruments were missing minor components by merely reading the top of peaks where base line shifts have occurred. In other words, equal weight quantities of various compounds are not always a true test for GLC analysis. To give you the most accurate test possible, we have designed a series of three standards:

(A) In Equal Weights

(B) Small to Large

(C) Large to Small

Price: 100 MG

SPECIAL SERVICE

Upon request, our glass-blowing department will seal your 100 mg ampule (at no extra charge) into 2 by 50 mg or 4 by 25 mg quantities. This special service is designed to assist GLC analysts in avoiding oxidation, especially when working with unsaturated standards.

TLC-REFERENCE STANDARDS*

Upon request, our glass-blowing department will seal your 100 mg ampule (at no extra charge) into 2 by 50 mg or 4 by 25 mg quantities. This special service is designed to assist TLC analysts in avoiding oxidation, especially when working with unsaturated standards.

PRICE/100 MG \$50.00 EACH OR ALL THREE \$90.00
