TOSOH BIOSCIENCE

NOMENCLATURE

What's in our names?

Tosoh Bioscience has the most comprehensive selection of process media resins, with a variety of pore and particle size combinations for several modes of chromatography. When it comes to naming our resins, we've got it down to a science (literally). Here's how you can identify the right resin for your purification process:

1. Resin Type

Tosoh Bioscience offers two base beads for our resin products: TOYOPEARL® and TSKgel®.

TOYOPEARL and TSKgel products are hydroxylated methacrylic polymer resins and are offered in many different pore sizes and particle diameters. The key differences between the two types are particle size availability, degree of crosslinking, dynamic binding capacity, and operating pressures. Since similarly functionalized TOYOPEARL and TSKgel resins have the same backbone polymer chemistry, the selectivity remains the same as you scale up or down.

5. Additional Abbreviations

Some of our products have additional features or need clarification about what type of product they are.

We use the following abbreviations to highlight these features:

HC	High Capacity
AR	Alkaline Resistant
MX	Mixed-Mode
AF	Affinity
Super	High Capacity Ion Exchanger
MegaCap	High Capacity Ion Exchanger for Capturing
GigaCap	Ultra High Capacity Ion Exchanger

Antib Affini

A. Antib Affini

Mixed Model

2. Ligand

TOYOPEARL or TSKgel resins are available in the following modes of chromatography functionalized with these ligands:

Mode	Ligand
HIC	Ether, PPG, Phenyl, Butyl, Hexyl
Anion Exchange	DEAE, QAE, Q, NH ₂
Cation Exchange	CM, SP, Sulfate
Antibody Affinity	rProtein A, rProtein L
Affinity	Tresyl, Epoxy, Formyl, Amino, Chelate, Red, Heparin, Carboxy
Mixed- Mode	Tryptophan (Trp)

4. Particle Size

Particle size is typically denoted in the product name as letters or numbers denoting the grade.

3. Pore Size

TOYOPEARL or TSKgel resins are available in the following pore sizes:

Particle size of TOYOPEARL and TSKgel resins (µm)

Particle	SIZE OF TOYOPEARL and 18	okgei resins (µm)

INTRODUCTION

SkillPak 1 and 5 mL columns are designed for fast method development, resin screening or sample concentration. Pre-packed with TOYOPEARL, TSKgel or Ca**Pure-HA process chromatography media, these columns offer superior evaluation of biomolecules, such as monoclonal antibodies, proteins and oligonucleotides.

SkillPak 1 and 5 mL pre-packed columns are designed for your purification and separation tasks from platform design to pilot scale. These columns are ready to use upon receipt and show excellent physical strength and ideal flow characteristics for industrial downstream processing.

Tables 1 and 2 below list the properties and operation specifications of the SkillPak 1 and 5 mL columns. These columns guarantee optimal performance and can be operated with commonly used low or medium pressure liquid chromatography systems. They are reproducibly packed and take into account the varying compressibility of each resin. This provides an accurate representation of conditions found in full scale columns.

APPLICATIONS

Design of Experiments (DoE) is a systematic method to determine the effects of various factors that can influence the output results. It is a technique used to generate the required information with the minimum amount of experimentation. Initial experiments are required in order to define the ranges for variables. DoE can be used for parameter screening and optimization as well as for robustness testing.

It is important to consider processing variables, including environmental constraints, early in the development of a purification process. SkillPak column formats are ideal to use for parameter and method optimization and for robustness testing for the development of a new or replacement purification process.

Method development for mAb purification: Determine elution pH for a mAb using SkillPak 1 mL and 5 mL columns

Finding the appropriate buffer and pH for mAb elution reduces the risk of increasing aggregation in the mAb sample. To identify optimized conditions for mAb binding and elution, a buffer-adjusted mAb containing hybridoma cell line supernatant was loaded onto a SkillPak 5 mL column pre-packed with TOYOPEARL AF-rProtein A HC-650F media.

Method development for mAb purification: mAb eluate polishing using SkillPak 1mL column

Eluate was prepared for a polishing step on a SkillPak 1 mL column packed with TOYOPEARL Sulfate-650F by adding four eluate volumes of 0.2mol/L acetate, pH5.0. Aggregate and other impurities in the protein A eluate were removed by using the SkillPak 1mL TOYOPEARL Sulfate-650F column. Figure 3 shows an efficient elution of mAb at a 0.35 mol/L NaCl step in the equilibration buffer. Impurities were removed by the polishing step as can be seen before and after the elution of the mAb peak.

PACKING PERFORMANCE

SkillPak 1mL and 5mL columns exhibit excellent flow characteristics packed with specified process resins and are compatible with low to medium pressure chromatography systems. Small configurations reduce resin costs and save valuable samples while delivering similar performance to larger preparative process columns. The figures below demonstrate the superior packing performance for SkillPak 1 mL and 5 mL columns pre-packed with a variety of TOYOPEARL resins.
