ESPECIFICACIONES DE LAS COLUMNAS SkillPak 1 mL

Dimensiones de Columna	7 mm ID × 2.5 cm altura de lecho
Volumen	1 mL
Flujo máximo	4 mL/min (600 cm/hr)
Presión de Trabajo Máxima	0.3 MPa
Conexiones con roscas estándar	(10-32 para 1/16" Capilar)
Tampón de Envío	20% etanol para TOYOPEARL y TSKgel [con la excepción de 0.5 mol/L de citrato sódico con 20% etanol para TSKgel SP-5PW (20) y SuperQ-5PW (20)], 20 mmol/L fosfato sódico con 20% etanol para Ca++Pure-HA

ELUCIÓN POR CAMBIO DE pH de mAb usando la columna SkillPak 1 mL TOYOPEARL AF-rProtein A HC-650F (PANEL A); Columna SkillPak 5 mL TOYOPEARL AF-rProtein A HC-650F (PANEL B)

Selección Skillpack 5mL

TH-45265	SkillPak Mixed Mode 5 mL column library, 5 mL x 1 each (Ca ++Pure-HA, TOYOPEARL MX-Trp-650M)	PVP 408 €
TH-45266	SkillPak Best-in-Class 5 mL column library, 5 mL x 1 each (Ca ++Pure-HA, TOYOPEARL AF-rProtein A HC-650F, AF-rProtein L-650F, NH 2-750F, Sulfate-650F)	PVP 1232 €

Dimensiones de Columna	8 mm ID x 10 cm altura de lecho
Volumen	5 mL
Flujo estándar	1.3 mL/min (150 cm/hr)
Flujo Máximo	5 mL/min (600 cm/hr) para TOYOPEARL M Y resinas de grado C; 2.5 mL/min (300 cm/hr) para TSKgel, Ca++Pure-HA y TOYOPEARL S- y resinas de grado F, incluido TOYOPEARL AF-rProtein A HC-650F y TOYOPEARL AF-rProtein L-650F
Presión de Trabajo Máxima	0.3 MPa para resinas TOYOPEARL, ≤ 0.4 MPa Para resinas TSKgel y Ca++Pure-HA
Conexiones con roscas estándar	(10-32 para 1/16" Capilar)
Tampón de Envío	20% etanol para TOYOPEARL y TSKgel 20 mmol/L fosfato sódico con 20% etanol para Ca++Pure-HA
Factor de Asimetría (As)	0.8-1.04 para TOYOPEARL y TSKgel, 0.8-2.6 para Ca++Pure-HA

CAPTURA DE Fab USANDO LA COLUMNA SkillPak 1 mL TOYOPEARL AF-rProtein L-650F

Column: SkillPak 1 mL TOYOPEARL AF-rProtein L-650F
 Flow rate: 0.5 mL/min
 Mobile phase: A: 0.1 mol/L citrate buffer, pH 6.5
 B: 0.1 mol/L citrate buffer, pH 2.2
 Detection: UV @ 280 nm
 Sample: papain-digested human IgG1

PROCESS MEDIA - FIND YOUR BEST FIT!

TOYOPEARL[®], TSKgel[®], and CA⁺⁺PURE-HA[®] Chromatography Resins

Biomolecules are purified by a succession of chromatography steps. Each step uses a different mode of separation, based on specific interactions between the biomolecules and the packing material.

The various modes are based on specific physical, chemical, or biological features of the target or sample, like size, charge, hydrophobicity, function or specific content of the molecule.

TOSOH BIOSCIENCE offers a comprehensive line of media and pre-packed columns for all modes of liquid chromatography - affinity, ion-exchange, mixed-mode, hydrophobic, hydroxyapatite, and size exclusion.

AFC Affinity Chromatography

AF-rProtein A HC-650F binds to the Fc part of antibodies. It allows for increased productivity and reduced production costs. IgG DBCs over 100 g/L can even be observed at higher titers. This prevents DSP bottlenecks even at short residence times.

AF-rProtein L-650F binds to the Kappa-light chain of antibodies and antibody derivatives. It excels all other commercially available protein L media with regards to binding capacity and robustness. It is especially suited for the purification of new antibody formats such as antibody fragments, single chain variable fragments, domain antibodies and immunoglobulin types that cannot be purified with Protein A media.

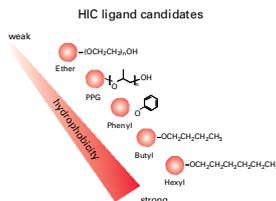

Antibody AFC resins	Min. static capacity (mAb)	Special feature
PROTEIN A		
AF-rProtein A HC-650F	68 g/L	Highest binding capacity
AF-rProtein A-650F	45 g/L	Fast flow rates
PROTEIN L		
AF-rProtein L-650F	64 g/L	Highest binding for non-standard mAb formats
Other AFC resins		
GROUP SPECIFIC	ACTIVATED RESINS*	REACTIVE RESINS*
AF-Chelate-650M	AF-Tresyl-650M	AF-Formyl-650M
AF-Red-650M	AF-Epoxy-650M	AF-Amino-650M
AF-Heparin HC-650M	AF-Carboxy-650M	

* Activated and reactive resins are used to couple your ligand of choice.

HIC Hydrophobic Interaction Chromatography

The large choice of pore and particle sizes for TOYOPEARL and TSKgel HIC resins gives the possibility to screen for the resin offering at the same time the highest binding capacity, the highest recovery, and the highest selectivity.

PPG-600M is specially well suited for the purification of antibodies and antibody-drug conjugates.

HIC resins	Typical capacity (g/L) Lysozyme (L) or mAb (A)	Special feature Target molecules
Ether-650 (S, M)	20 (L)	Very hydrophobic proteins
PPG-600M	30 (A)	Antibodies and ADCs
Phenyl-600M	50 (A)	Antibodies
Phenyl-650 (S, M, C)	30 (A)	Recombinant proteins
SuperButyl-550C	40 (L)	Recombinant proteins
Butyl-600M	50 (A)	Antibodies
Butyl-650 (S, M, C)	40 (L)	Recombinant proteins
Hexyl-650C	40 (L)	Hydrophilic proteins
Ether-5PW (20, 30)	20 (L)	Very hydrophobic proteins
Phenyl-5PW (20, 30)	20 (L)	Highest resolution

MXC Mixed Mode Chromatography

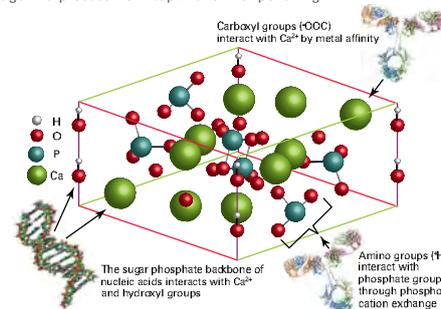

MX-Trp-650M is a multimodal resin with unique selectivity and high recovery. Its ligands have both ionic and hydrophobic groups. This unique ligand allows the separation of acidic, basic, and neutral proteins by one resin. It provides high binding capacity and outstanding selectivity for mAbs and mAb aggregates.

MXC resins	Typical capacity (mAb)	Recovery (mAb)
MX-Trp-650M	95 g/L	97 %

HA Hydroxyapatite

Ca⁺⁺Pure-HA provides exceptional separation properties and unequalled selectivity and resolution for multiple classes of biomolecules. The robust nature of Ca⁺⁺Pure-HA offers the flexibility to use this resin at any stage in a process from capture to final polishing.

HA resin	Typical capacity (human IgG)
Ca ⁺⁺ Pure-HA	> 30 g/L (2 min residence time)

IEC Ion Exchange Chromatography

Sulfate-650F is a highly selective, salt tolerant and high capacity cation exchange resin for the capture and intermediate polishing of biomolecules. It offers the ability to use mobile phases at physiological conditions without any loss of capacity or selectivity.

NH2-750F is a salt-tolerant anion-exchange resin, working both in flow-through and bind/elute mode. It is ideal for removing impurities from target proteins without dilution, or for intermediate or final purification of monoclonal antibodies. One of its major benefits is the possibility to remove aggregates as well as endotoxins, HCPs, viruses and DNA in a single step.

SuperQ-5PW (20) is the industry standard for the purification of oligonucleotides.

IEC resins	Typical capacity (g/L resin)			Special feature Target molecules
	BSA	Lysozyme	mAb	
STRONG ANION EXCHANGERS				
NH2-750F	70			Salt-tolerant
GigaCap Q-650 (S, M)	150	110		Highest capacity
SuperQ-650 (S, M, C)	145	15		Proteins <50 kDa
Q-600C AR	110	90		Alkaline stability
QAE-550C	50	30		Capturing of small proteins
SuperQ-5PW (20, 30)				Oligonucleotides
WEAK ANION EXCHANGERS				
GigaCap DEAE-650M				Blood products and nucleic acids.
DEAE-650 (S, M, C)	25	30		GigaCap - highest capacity
DEAE-5PW (20, 30)				

STRONG CATION EXCHANGERS				
Sulfate-650F		115		Salt-tolerant
GigaCap S-650 (S, M)	200	150	140	Highest capacity
SP-650 (S, M, C)	40	10	50	Cost efficient
SP-550C	100	15	80	Capturing of small proteins
MegaCap II SP-550EC	70		90	Insulin capturing
SP-3PW (30)			65	Insulin polishing
SP-5PW (20, 30)			30	Highest resolution
WEAK CATION EXCHANGERS				
GigaCap CM-650M	35	100		Highest capacity
CM-650 (S, M, C)	35			Cost efficient

SEC Size Exclusion Chromatography

All TOYOPEARL resins are based on the polymeric HW-type beads. Their rigid polymeric backbone has better pressure-flow properties than most other commercially made materials. The base resins are stable over the pH 2-12 range for operating conditions and pH 1-13 for cleaning conditions.

SEC resins	Pore size	Target molecules
HW-40 (S, F, C)	5 nm	Separation of low MW compounds / buffer exchange
HW-50 (S, F)	12.5 nm	Peptide fragments
HW-55 (S, F)	50 nm	Proteins and antibodies
HW-65 (S, F, C)	100 nm	
HW-75 (F)	> 100 nm	Large nucleic acids, viruses and plasmid DNA

WHAT'S IN A NAME?

1. Resin types

Tosoh Bioscience offers three base beads: TOYOPEARL, TSKgel, and Ca⁺⁺Pure-HA.

TOYOPEARL and TSKgel products are hydroxylated methacrylic polymer resins and are offered in many different pore sizes and particle diameters. The key differences between the two types are particle size availability, degree of crosslinking, dynamic binding capacity, and operating pressures.

Since similarly functionalized TOYOPEARL and TSKgel resins have the same backbone polymer chemistry, the selectivity remains the same when scaling up or down.

Unlike all other TOYOPEARL and TSKgel products, Ca⁺⁺Pure-HA is a hydroxyapatite resin. Ca⁺⁺Pure-HA is a spherical, macroporous form of the hexagonal crystalline structure of Ca₁₀(PO₄)₆(OH)₂.

2. Particle sizes

Grade	TOYOPEARL	GigaCap	TSKgel	Ca ⁺⁺ Pure-HA
EC	200 µm			
C	100 µm (SEC are 75 µm)			
M	65 µm (MX-Trp is 75 µm)	75 µm		
F	45 µm			
S	35 µm (SEC are 30 µm)	35 µm		
(30)			30 µm	
(20)			20 µm	
HA				39 µm

3. Pore sizes of base media for AFC, MXC, IEC, and HIC

TOYOPEARL resin	HW-XX base resin	Pore size
TOYOPEARL 550 resins	HW-55 base resin	50 nm
TOYOPEARL 600 resins	HW-60 base resin	75 nm
TOYOPEARL 650 resins	HW-65 base resin	100 nm
TOYOPEARL 750 resins	HW-75 base resin	> 100 nm
TSKgel 3PW resin	PW-3000 base resin	25 nm
TSKgel 5PW resin	PW-5000 base resin	100 nm
